

AUSTRALIAN AI READINESS CHECKLIST

15 points to run before any team member touches an AI tool with company or client data.

By Ravijeet Dang — AI advisor, Melbourne. ravijeet.com

1. Data mapping (do this first)

- | | | |
|---|--|---|
| 1 | List every place company or client data currently leaves the business (email, cloud tools, AI chats, third parties). | ■ |
| 2 | Mark which flows contain personal information (names, emails, financials, health). | ■ |
| 3 | Identify any AI tool staff use informally — including their own accounts. | ■ |

2. Privacy obligations

- | | | |
|---|--|---|
| 4 | Confirm whether the Privacy Act / APP 11 applies to you (revenue or data volume thresholds). | ■ |
| 5 | Decide what personal data is permitted into AI tools, and what is banned outright. | ■ |
| 6 | Have a process to assess a notifiable breach if data does escape. | ■ |

3. Local-first fallback

- | | | |
|---|---|---|
| 7 | For sensitive work, trial a local / on-prem model so data never leaves your infrastructure. | ■ |
| 8 | Document which tasks are safe on public tools vs. which need local-first. | ■ |
| 9 | Keep a vendor-independent fallback so a price/term change can't halt your workflow. | ■ |

4. Vendor & data residency

- | | | |
|----|---|---|
| 10 | Record where each AI vendor stores and processes data (AU / US / EU / elsewhere). | ■ |
| 11 | Check the contract: does the vendor train on your inputs? Push back if so. | ■ |
| 12 | Confirm data-residency and deletion terms match your obligations. | ■ |

5. Accountability & audit

- | | | |
|----|--|---|
| 13 | Name one person accountable for AI risk. | ■ |
| 14 | Publish a short, readable AI usage policy and get acknowledgement. | ■ |
| 15 | Be able, on demand, to show what data flows to which AI vendor. | ■ |

Most breaches aren't malicious — they're helpful people pasting data into the wrong tool. Map the flows first, then pick the model. If you want a 30-minute walkthrough of your real exposure, book a call at ravijeet.com/contact.html.
